

that the pest risk within that orchard has been eliminated.

(3) If the Mexican NPPO discovers the stem weevil *Copturus aguacatae* in fruit at a packinghouse, the Mexican NPPO must investigate the origin of the infested fruit and provide APHIS with information regarding the circumstances of the infestation and the pest risk mitigation measures taken. The orchard where the infested fruit originated will lose its export certification immediately and avocado exports from that orchard will be suspended until APHIS and the Mexican NPPO agree that the pest eradication measures taken have been effective and that the pest risk within that orchard has been eliminated.

(f) *Ports.* The avocados may enter the United States only through a port of entry located in a State where the distribution of the fruit is authorized pursuant to paragraph (a)(2) of this section.

(g) *Inspection.* The avocados are subject to inspection by an inspector at the port of first arrival. At the port of first arrival, an inspector will sample and cut avocados from each consignment to detect pest infestation.

(h) *Repackaging.* If any avocados are removed from their original shipping boxes and repackaged, the stickers required by paragraph (c)(3)(vi) of this section may not be removed or obscured and the new boxes must be clearly marked with all the information required by paragraph (c)(3)(vii) of this section.

§ 319.56-2gg Administrative instructions; conditions governing the entry of peppers from Spain.

Peppers (fruit) (*Capsicum* spp.) may be imported into the United States from Spain only under permit, and only in accordance with this section and all other applicable requirements of this subpart:

(a) The peppers must be grown in the Alicante or Almeria Province of Spain in pest-proof greenhouses registered with, and inspected by, the Spanish

Ministry of Agriculture, Fisheries, and Food (MAFF);

(b) The peppers may be shipped only from December 1 through April 30, inclusive;

(c) Beginning October 1, and continuing through April 30, MAFF must set and maintain Mediterranean fruit fly (Medfly) traps baited with trimedlure inside the greenhouses at a rate of four traps per hectare. In all outside areas, including urban and residential areas, within 8 kilometers of the greenhouses, MAFF must set and maintain Medfly traps baited with trimedlure at a rate of four traps per square kilometer. All traps must be checked every 7 days;

(d) Capture of a single Medfly in a registered greenhouse will immediately halt exports from that greenhouse until the Administrator determines that the source of infestation has been identified, that all Medflies have been eradicated, and that measures have been taken to preclude any future infestation. Capture of a single Medfly within 2 kilometers of a registered greenhouse will necessitate increased trap density in order to determine whether there is a reproducing population in the area. Capture of two Medflies within 2 kilometers of a registered greenhouse during a 1-month period will halt exports from all registered greenhouses within 2 kilometers of the capture, until the source of infestation is determined and all Medflies are eradicated;

(e) The peppers must be safeguarded from harvest to export by insect-proof mesh or plastic tarpaulin, including while in transit to the packing house and while awaiting packing. They must be packed in insect-proof cartons or covered by insect-proof mesh or plastic tarpaulin for transit to the airport and subsequent export to the United States. These safeguards must be intact upon arrival in the United States;

(f) The peppers must be packed for shipment within 24 hours of harvest;

(g) During shipment, the peppers may not transit other fruit fly-supporting areas unless shipping containers are sealed by MAFF with an official seal whose number is noted on the phytosanitary certificate; and

(h) A phytosanitary certificate issued by MAFF and bearing the declaration, “These peppers were grown in registered greenhouses in Alicante or Almeria Province in Spain,” must accompany the shipment.

(Approved by the Office of Management and Budget under control number 0579–0210)

[63 FR 65656, Nov. 30, 1998, as amended at 68 FR 37922, June 25, 2003; 70 FR 72892, Dec. 8, 2005]

§ 319.56–2hh Conditions governing the entry of peppers from New Zealand.

Peppers from New Zealand may be imported into the United States only under the following conditions:

(a) The peppers must be grown in New Zealand in insect-proof greenhouses approved by the New Zealand Ministry of Agriculture and Forestry (MAF).

(b) The greenhouses must be equipped with double self-closing doors, and any vents or openings in the greenhouses (other than the double closing doors) must be covered with 0.6 mm screening in order to prevent the entry of pests into the greenhouse.

(c) The greenhouses must be examined periodically by MAF to ensure that the screens are intact.

(d) Each shipment of peppers must be accompanied by a phytosanitary certificate of inspection issued by MAF bearing the following declaration: “These peppers were grown in greenhouses in accordance with the conditions in § 319.56–2hh.”

[66 FR 45161, Aug. 28, 2001]

§ 319.56–2ii Administrative instructions: conditions governing the entry of mangoes from the Philippines.

Mangoes (fruit) (*Mangifera indica*) may be imported into the United States from the Philippines only under the following conditions:

(a) Mangoes grown on the island of Guimaras, which the Administrator has determined meet the criteria set forth in § 319.56–2(e)(4) and § 319.56–2(f) with regard to the mango seed weevil (*Sternochetus mangiferae*), are eligible for importation into all areas of the United States. Mangoes from all other areas of the Philippines except Palawan are eligible for importation

into Hawaii and Guam only. Mangoes from Palawan are not eligible for importation into the United States.

(b) *Treatment.* The mangoes must be subjected to the following vapor heat treatment for fruit flies of the genus *Bactrocera*. The treatment must be conducted in the Philippines under the supervision of an inspector.

(1) Size the fruit before treatment. Place temperature probes in the center of the large fruits.

(2) Raise the temperature of the fruit by saturated water vapor at 117.5 °F (47.5 °C) until the approximate center of the fruit reaches 114.8 °F (46 °C) within a minimum of 4 hours.

(3) Hold fruit temperature at 114.8 °F (46 °C) for 10 minutes.

(4) During the run-up time, temperature should be recorded from each pulp sensor once every 5 minutes. During the 10 minutes holding time, temperature should be recorded from each pulp sensor every minute. During the last hour of the treatment, which includes the 10-minute holding time, the relative humidity must be maintained at a level of 90 percent or higher. After the fruit are treated, air cooling and/or drench cooling are optional.

(c) *APHIS inspection.* Mangoes from the Philippines are subject to inspection under the direction of an inspector, either in the Philippines or at the port of first arrival in the United States. Mangoes inspected in the Philippines are subject to reinspection at the port of first arrival in the United States as provided in § 319.56–6.

(d) *Labeling.* Each box of mangoes must be clearly labeled in accordance with § 319.56–2(g). Shipments originating from approved areas other than Guimaras must be labeled “For distribution in Guam and Hawaii only.”

(e) *Phytosanitary certificate.* Mangoes originating from all approved areas must be accompanied by a phytosanitary certificate issued by the Republic of the Philippines Department of Agriculture that contains an additional declaration stating that the mangoes have been treated for fruit flies of the genus *Bactrocera* in accordance with paragraph (b) of this section. Phytosanitary certificates accompanying shipments of mangoes originating from the island of Guimaras
